

Increase Your Profits by using Lean and 5S

Hello! I'm Scott Morrison, and I currently work with several LMC dealers throughout the Northeast and Midwest. I show them how to reduce their operational costs through a variety of analytical tools.

Recently, you may have seen a notice from LMC regarding a webinar I presented to member dealers such as yours. This webinar was recorded and is now available online, through the [LMC website](#).

The webinar will give you answers to the following questions:

- 1) What are Lean and 5S?
- 2) How will using Lean and 5S help me increase my profit?
- 3) How can I start implementing these Lean and 5S tools at my dealership(s) and any of my manufacturing/production facilities?

Why Start the Lean Journey?

Actual Project Results:

- Reduced Lead Time for manufactured doors by **70% through eliminating extra steps and reorganizing layout and operator duties**
- Improved productivity of yard stagers by **30% through reorganizing layout and optimizing fork truck pathways**
- Reduced YOY shrinkage at annual physical inventory by **several thousand dollars by implementing 5S**

I encourage you to invest about 45 minutes of your time to watch the webinar and learn about the basics of Lean and 5S, specifically from a lumber dealer's perspective. If you are interested in discussing your current situation, please contact me for a complimentary consultation. You can reach me at (603) 491-6263 or scott@s-morrison.com. You are also welcome to visit my website, www.s-morrison.com, for more examples regarding my consulting practice. Thanks and I look forward to talking to you soon!

Scott's Background:

With bachelor's and master's degrees in industrial engineering, plus over thirty years' experience in engineering, quality, production, and operations management, Scott Morrison has a vast background of education and knowledge. Possessing a sharp eye for understanding processes and then cutting through the waste to enhance the value of those processes to help you discover the root cause(s) of your productivity problems, Scott works with all levels of management in your company to find the best solutions to eliminate waste and streamline processes.

Scott has experience in industries and technologies as diverse as lumber and building material distribution, wood and metal products manufacturing, rubber and plastics molding, metal stamping, electronic assemblies, and consumer and industrial products. Excellent communication skills plus both shop floor and senior management experience allow Scott to easily relate to everyone in your organization.
